MareSkill

## Smart and innovative blue skills for competitive blue economy

The project aims at the greater alignment of industry needs and occupational profiles with training and curricula through the evaluation of training and education methods to effectively increase employment and career opportunities on the cross-border level.

These education and training programs would provide targeted groups with the skills and knowledge needed to successfully work in the blue economy sectors and help to support the growth of these industries by providing a skilled workforce.

### Kick-off of MareSkill Pilot Activities!

The MareSkill project officially launched its pilot activities, which aim to address critical challenges in the blue economy. Through collaborative efforts between industry experts and researchers, the project is implementing innovative solutions and testing new methodologies to promote sustainable development.
